PALM HILLS

Badya Second Release

Lead Nurture Campaign

Presented by: Mostafa Ehab | Xperience 1st

The Client: Palm Hills Development

Palm Hills Developments is one of Egypt's largest private real estate developers, best known for large-scale master-planned communities on the outskirts of Cairo.

Badya is their flagship West Cairo project: a self-contained city targeting upper-middle and premium buyers who want scale, greenery, and a long-term community not just a unit.

The brand carries weight. The list we are working with already trusts it.

PALM HILLS

The Problem

Four months of paid social and portal lead generation have filled the Badya pipeline....but volume alone is not conversion.

Without a structured nurture strategy, high-cost leads go cold, warm prospects receive irrelevant messages, and the sales team chases noise instead of opportunity.

The base needs to work harder before any new spend is justified.

Recommended Multi-BU Architecture

Functional split, rather than just Regional

PALM HILLS

Objective and Targets

Drive 120 booked site visits in 14 days from the existing base before increasing paid media spend.

- Campaign targets leads already in the database, not new acquisition.
- Success is measured by confirmed appointments, not clicks or opens.

PALM HILLS

Channel rules

No channel is used without a valid consent record.

- Email is the primary channel for all segments.
- SMS is the fallback where explicit SMS consent is recorded.
- WhatsApp is reserved for the community segment only. Owners active in the Badya community app who have granted WhatsApp consent.

PALM HILLS

01

460 rows in the source list resolve to 420 unified individuals after identity resolution.

3 mutually exclusive segments cover every contact the campaign needs to reach.

Three Audiences, One List

Refreshed Daily

02

Segments refresh daily at **09:00 AM Africa/Cairo.**

Late opt-outs and mid-campaign conversions are automatically enforced before the daily send window opens.

PALM HILLS

Segment 1: High-Intent Leads (37)

37 warm, uncontracted leads who have enquired about Badya and fall within the target price band.

- Priority segment for the 14-day nurture window
- Active interest, no signed contract, and a budget of range of 8M+ EGP

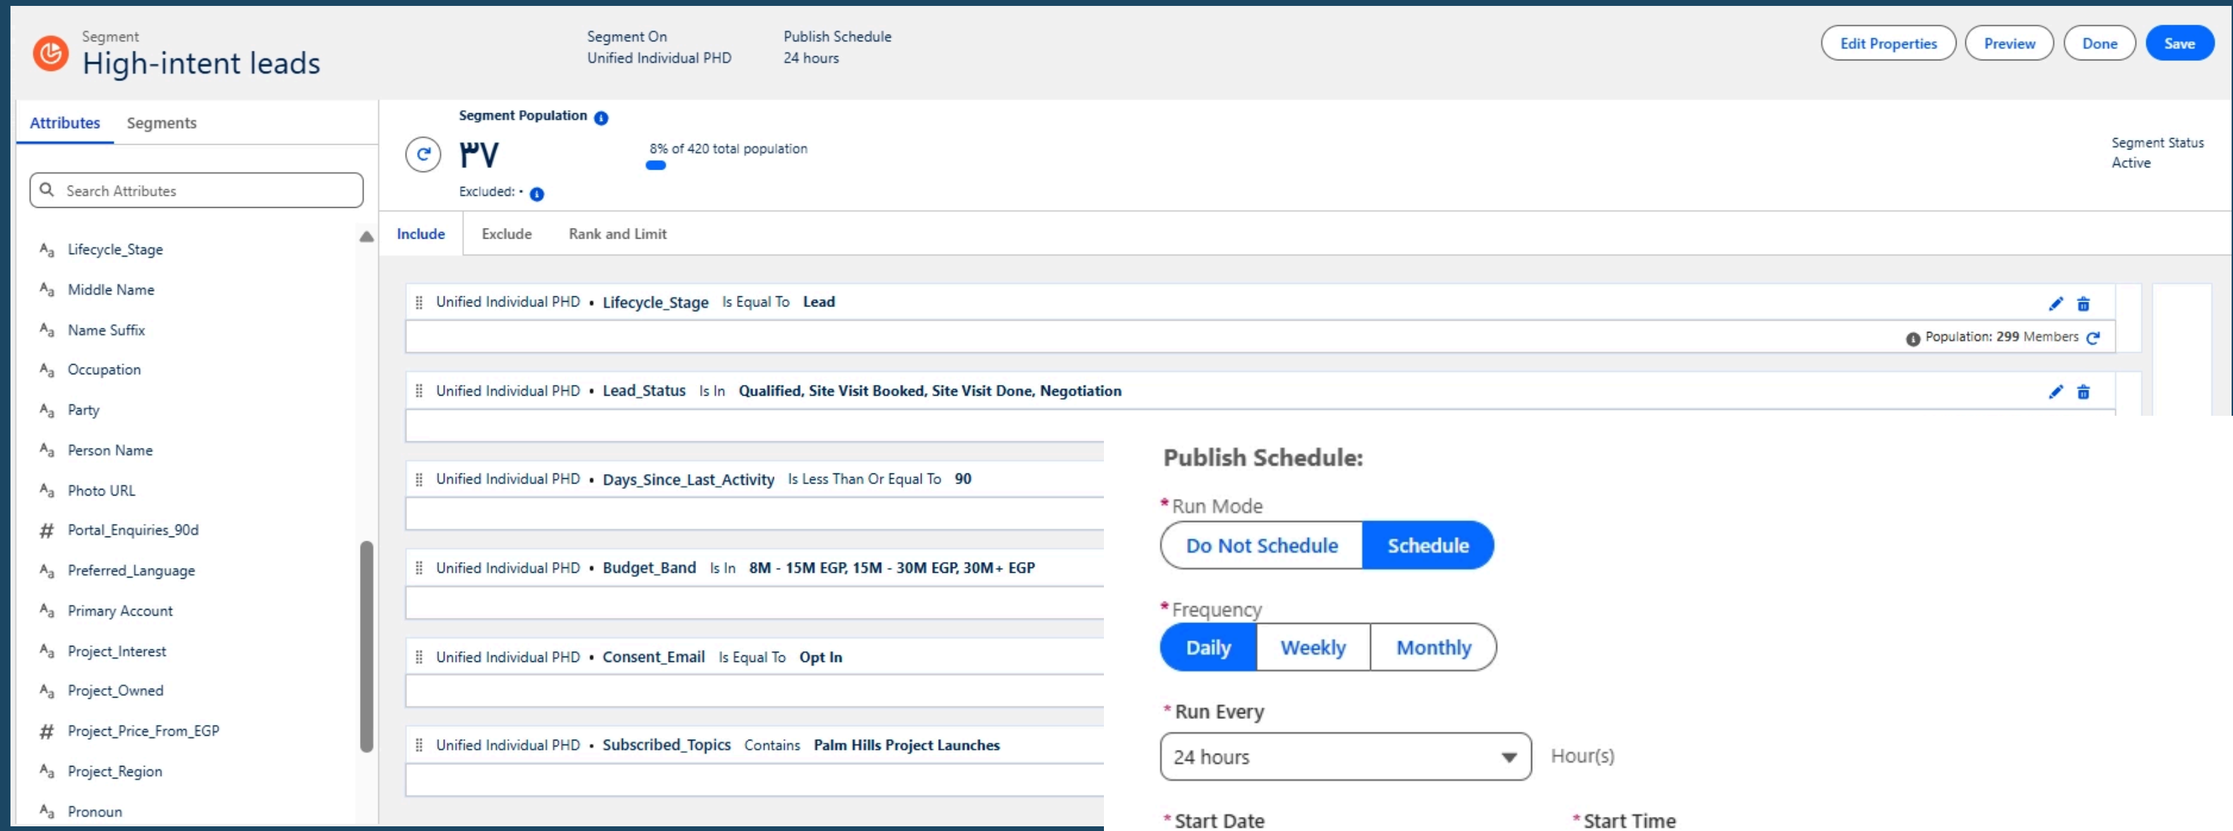

Days_Since_Last_Activity ≤ 90
- 90 days Lockback window

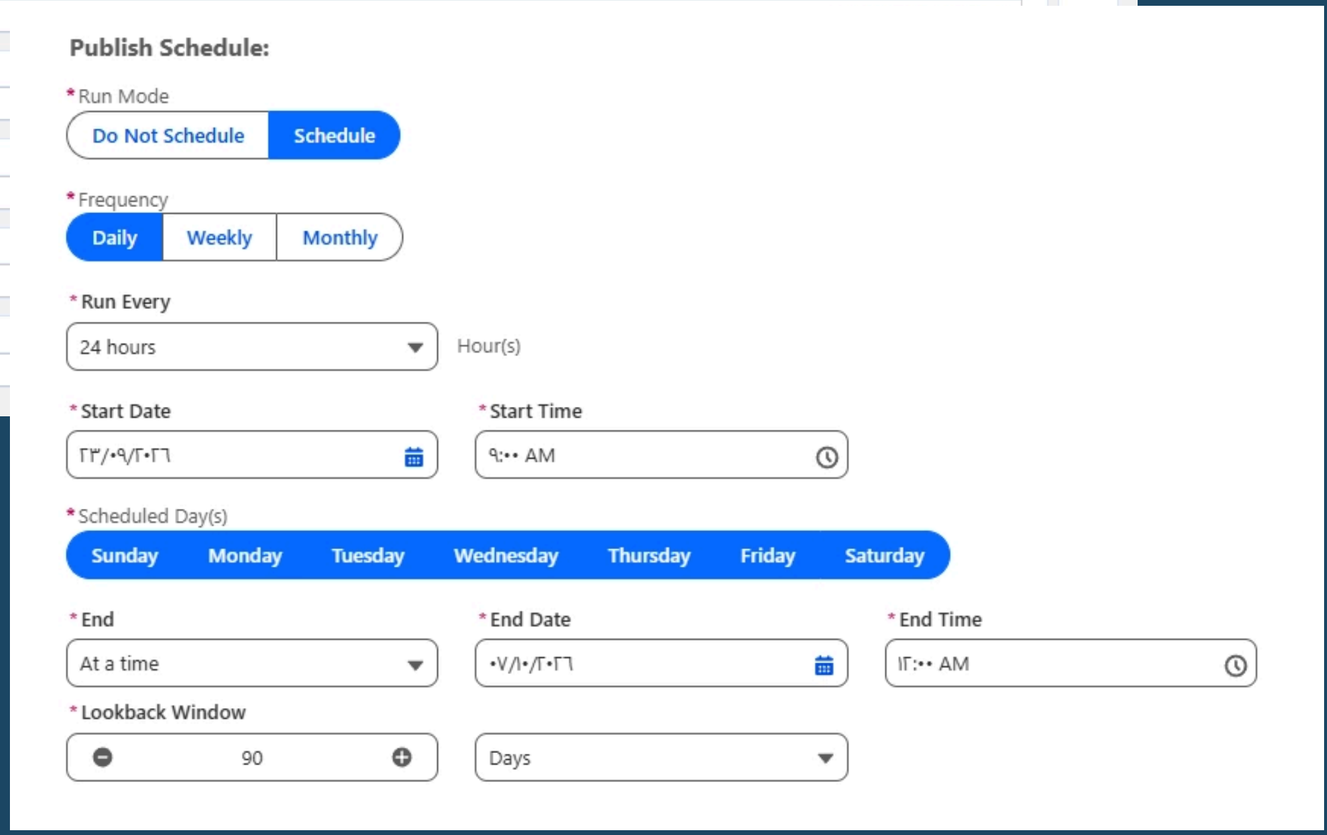

Highest conversion probability of the three audiences.

- Primary channel is email, SMS as fallback where consented.
- First to receive PHD-E1: the personalised Badya shortlist send.

PALM HILLS

High-Intent Example

PALM HILLS

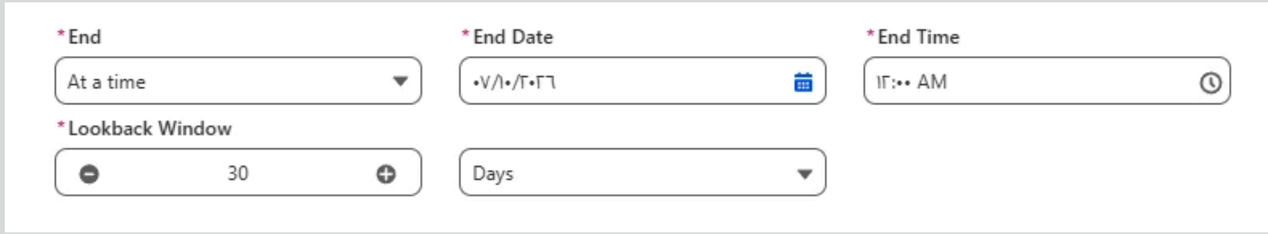

Segment 2: Owners worth second Unit (24)

24 qualified owner who already purchased in Badya and still active in the community app.

- Cross-sell target for the Badya second release.
- Installment status is strictly current,

App_Sessions_30d ≥ 3 sessions

- 30 Days Lockback Window

Exclusive cross-sell opportunity requiring a genuinely different tone.

- Primary channel is Email via the Palm Hills Resale & Investment subscription.
- First to receive PHD-E2: the exclusive owner-only allocation released before the public launch.

PALM HILLS

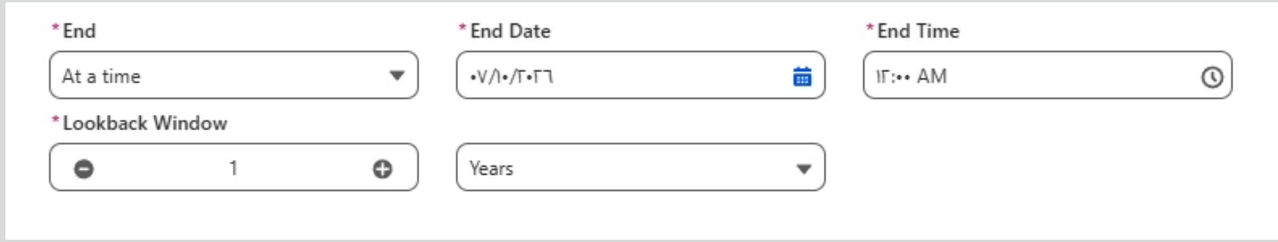

Segment 3: Dormant Enquiries (27)

27 older leads who have not engaged recently but are cheaper to reactivate than acquiring new leads on Meta.

- Re-engagement segment mutually exclusive from the high-intent audience.

Uncontracted leads whose last recorded activity was between 91 and 365 days ago

- 1 Year Lockback window

Low-pressure reactivation target designed to wake up cold interest.

- Primary channel is email via the Palm Hills Project Launches subscription.
- First to receive PHD-E3: a low-pressure reactivation email containing one question, one link, and no brochure

PALM HILLS

The Numbers Trap: Honest Math

61

High-Intent (37) plus Owners (24) equals 61 warm individuals.
Honest ceiling before any consent or suppression filter is applied.

120

Booked site visits targeted in 14 days. The gap is not a build error, it is a data reality that paid media must close.

Judgement over execution. The brief asks for 120 booked site visits. The qualified, reachable base is 61. No journey design closes that gap alone. The honest output of this build is maximum conversion of the 61, a clean suppression list, and a documented case for increasing the qualified pipeline before the next release window.

PALM HILLS

The Journey: Overview

Segment-triggered flow on the High-Intent Leads segment. Refreshed and injected daily at 09:00 Africa/Cairo. Runs for 14 days from first entry. Entry is live, new qualifiers join each morning, suppressions re-checked before every send.

PALM HILLS

High-Intent Walkthrough: Entry and Suppression

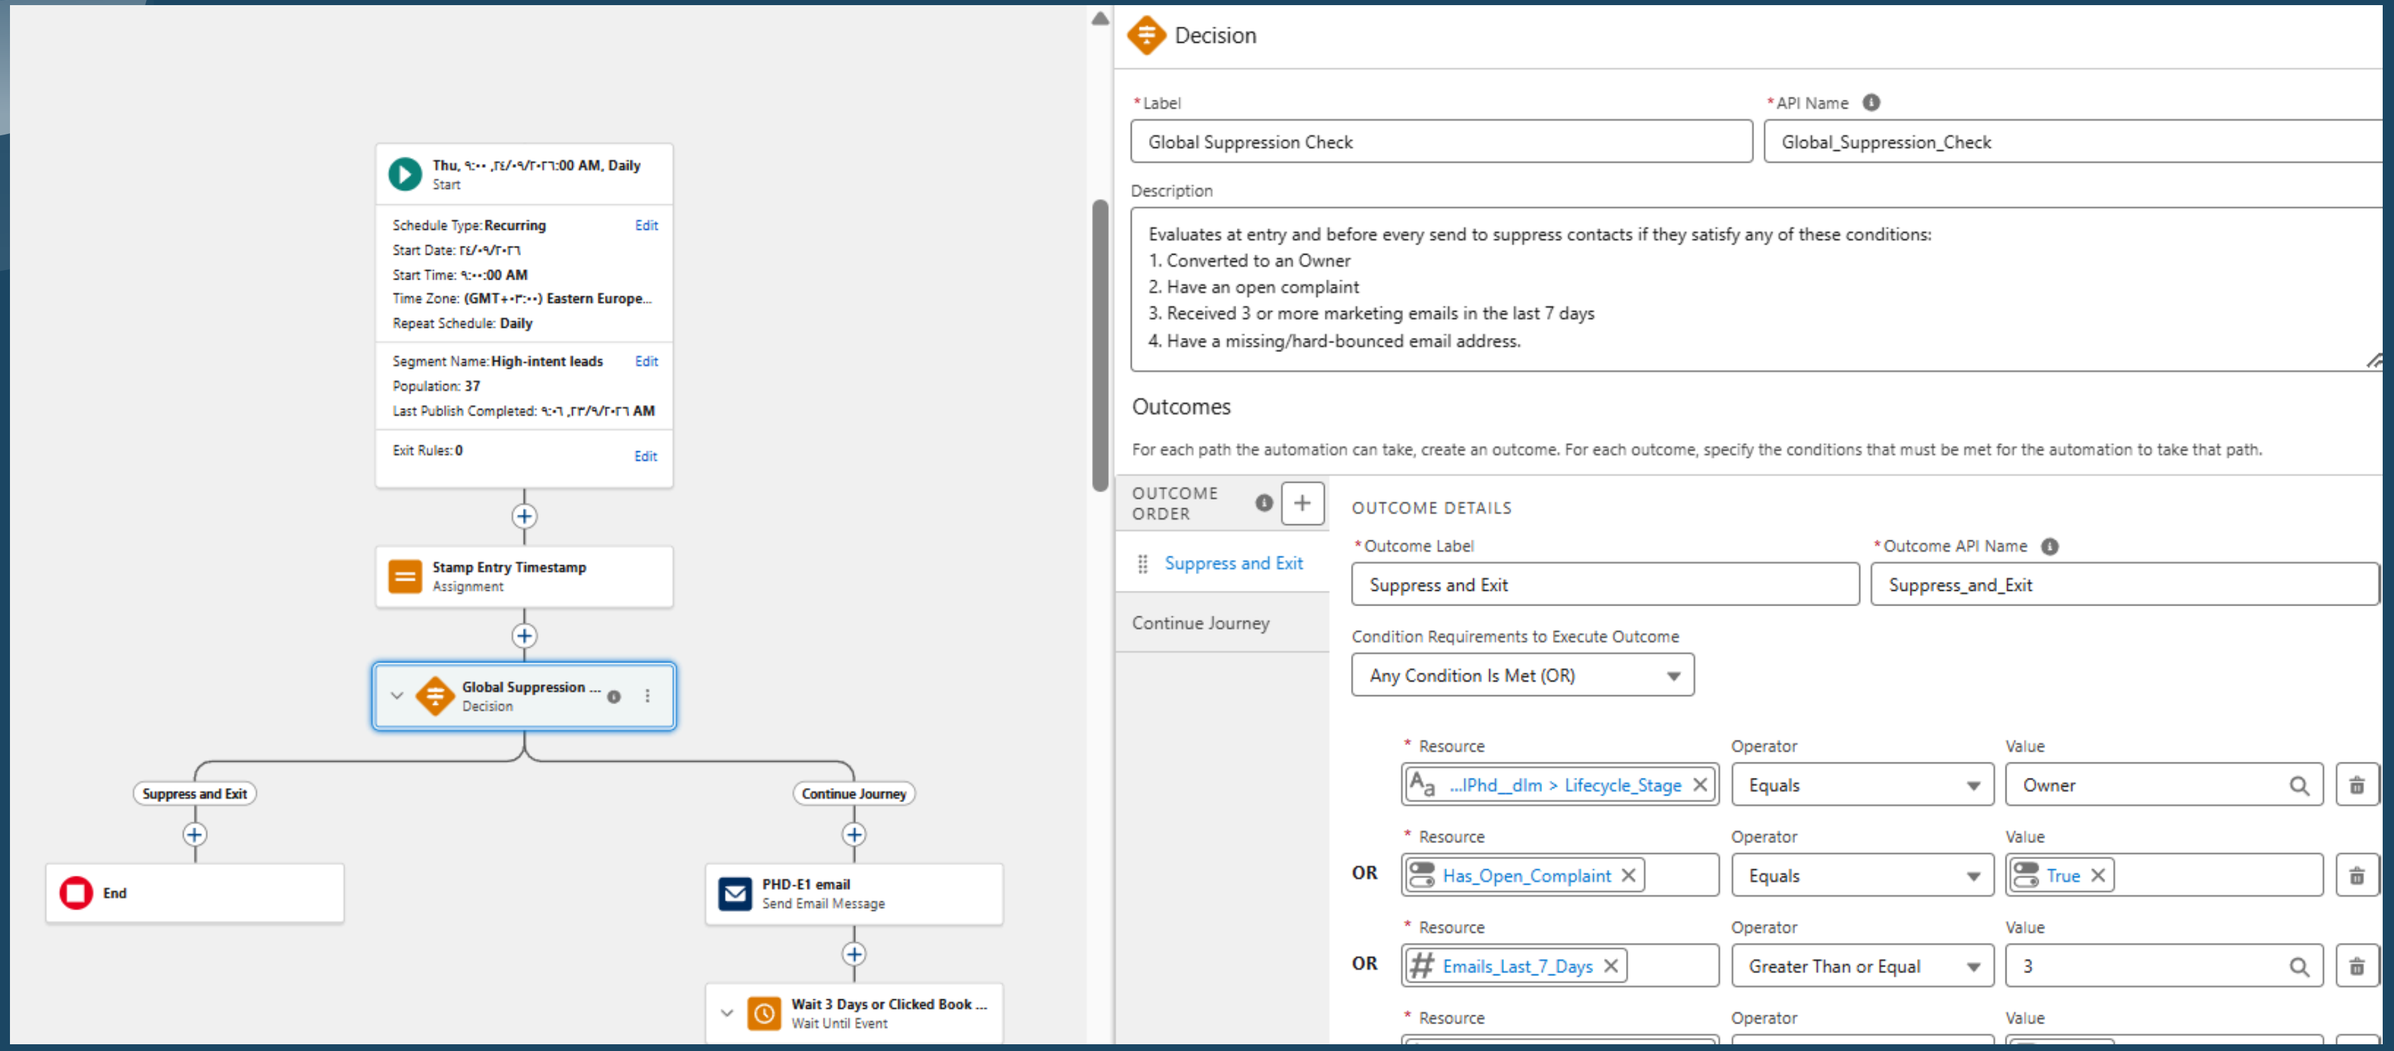

01

Anchor every wait to entry time, not clock time. All delays are relative to the moment the contact entered the flow. Never to a fixed calendar date.

02

A decision split runs immediately before each email or SMS step to confirm consent and segment membership are still valid.

Global_Suppression_Check
Description
Evaluates at entry and before every send to suppress contacts if they satisfy any of these conditions:
1. Converted to an Owner
2. Have an open complaint
3. Received 3 or more marketing emails in the last 7 days
4. Have a missing/hard-bounced email address.
Outcomes
For each path the automation can take, create an outcome. For each outcome, specify the conditions that must be met for the automation to take that path.

Language and First Send: Watanabe’s Way

01

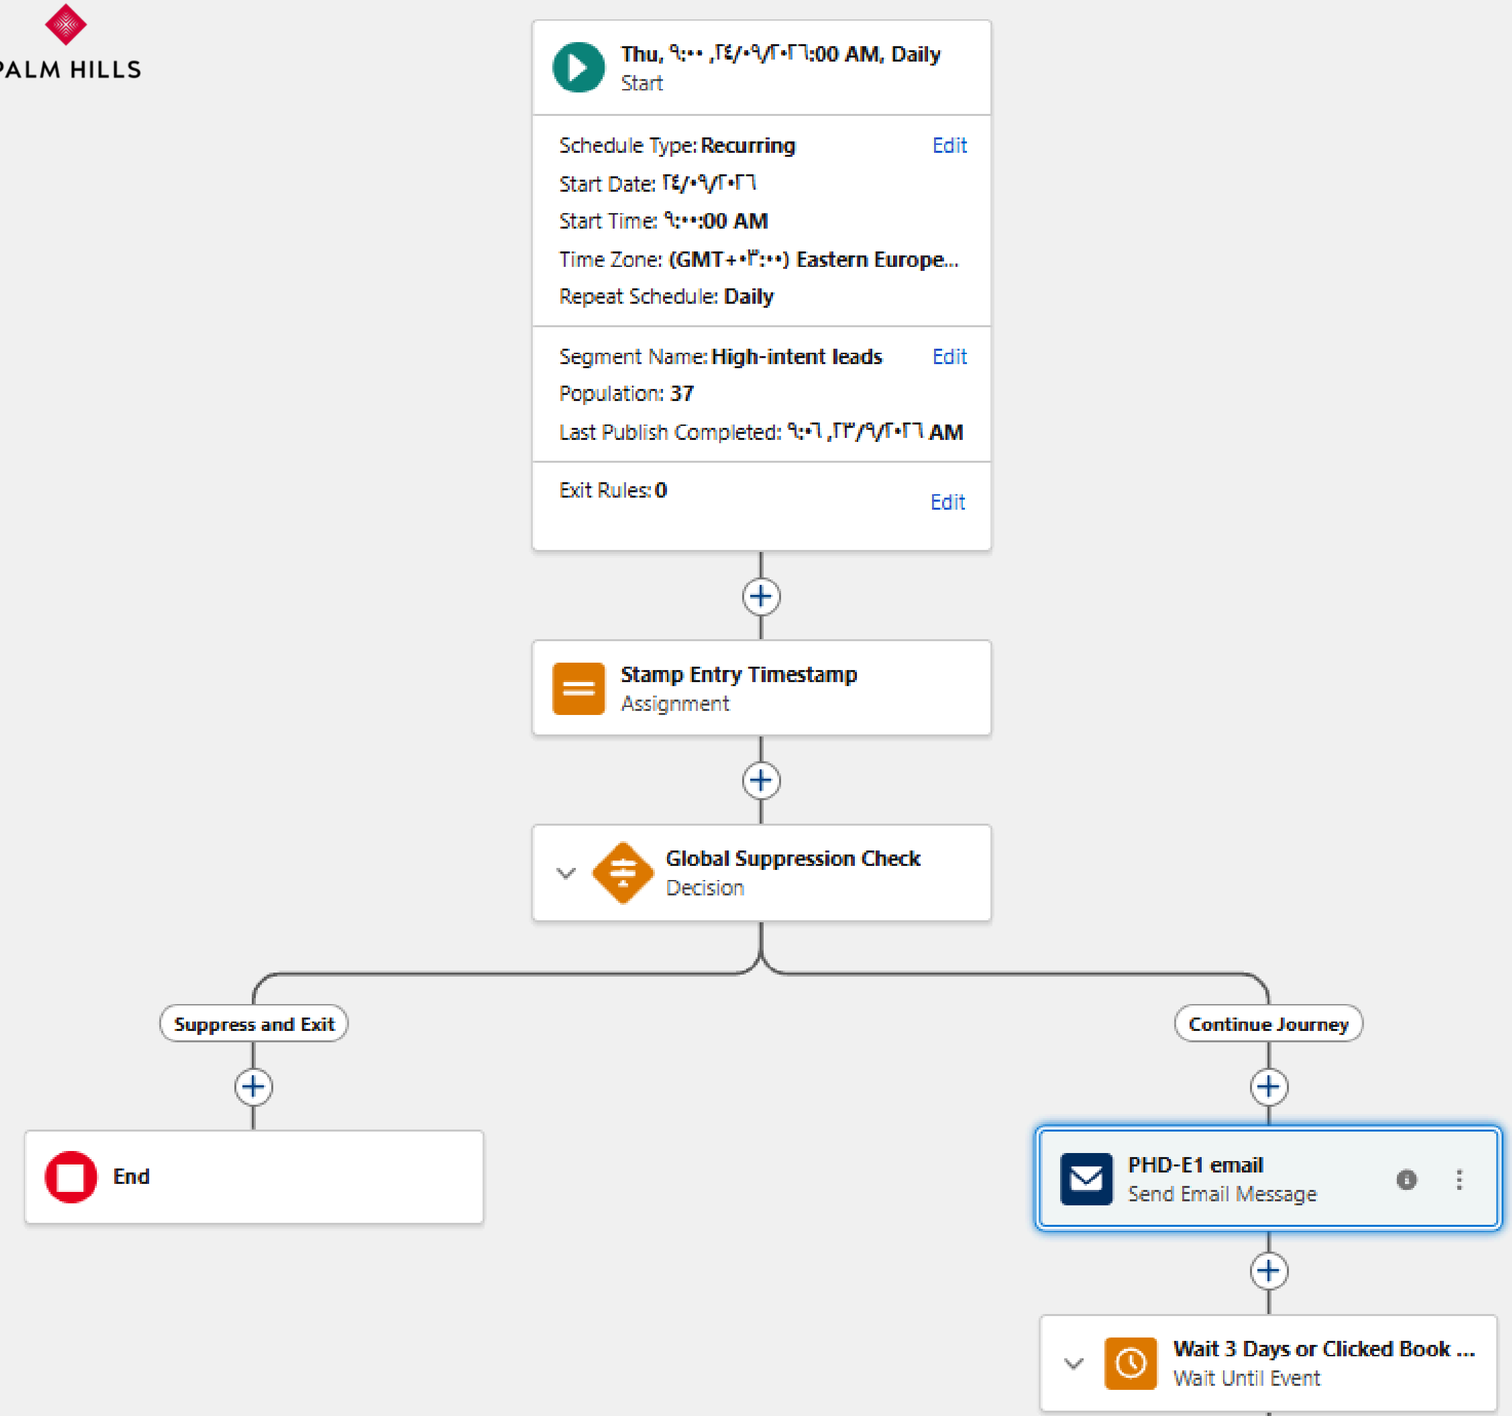

Arabic Route
Contact's preferred language is Arabic. Journey sends PHD–E1 in Arabic. Subject line reads as a personal follow-up from their agent.

02

English Route
Contact's preferred language is English or is not set. Journey sends PHD–E1 in English. Same logic, same timing, one journey.

PALM HILLS

Why a Reusable Sub-Flow: Assign & Notify Sales

01

Early Click Path. When a lead clicks in the first send, the journey immediately calls Assign and Notify Sales.

Routing the contact to the right agent and firing a real-time alert without duplicating logic.

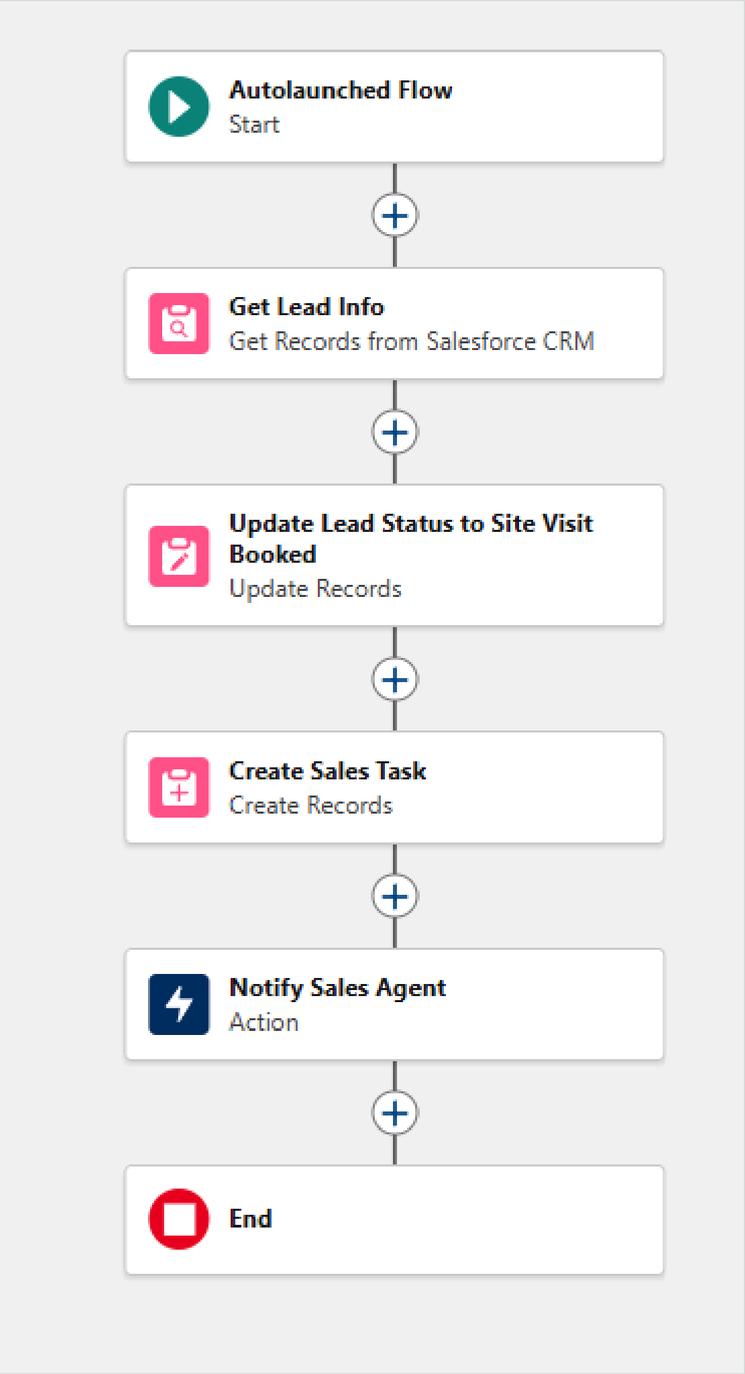

02

Converged Second Check. After the re-engagement wait, both the engaged and the late-open paths merge and call the same sub-flow again.

Built once, maintained once, consistent every time.

PALM HILLS

- Writes a campaign member status change, updates Lead Status,
- Creates a Task on the owning sales team,
- Sends an internal notification.

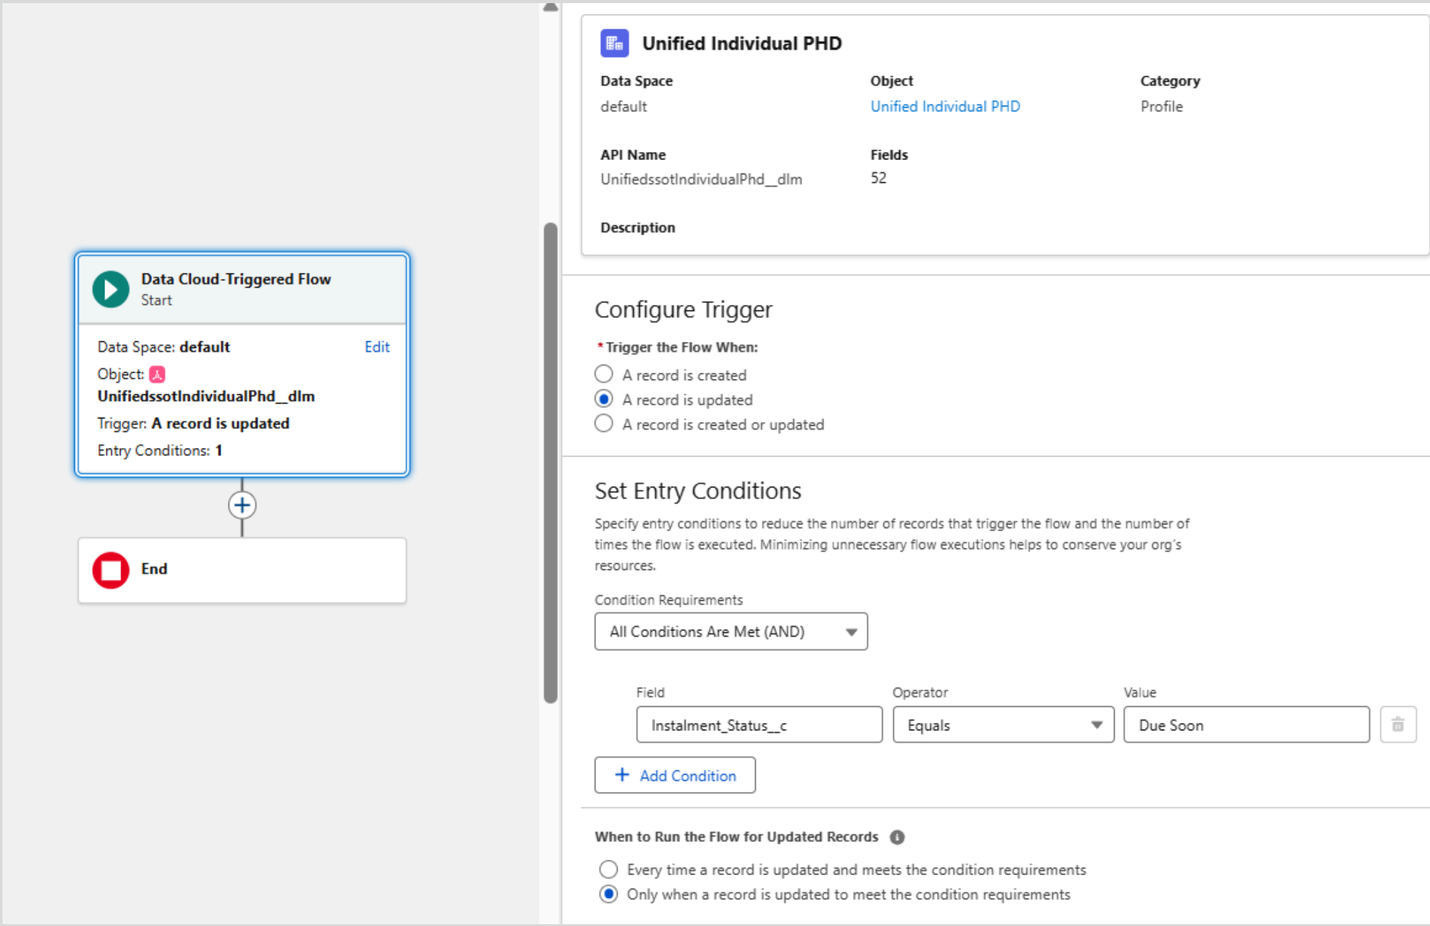

PALM HILLS

Second Flow: Owner Service

Data Cloud record-triggered flow.
Fires only when Instalment_Status changes to Due Soon.

The single decision this flow must get right: is this message promotional or transactional?

- Promotional requires active consent. Transactional can proceed without it.

PALM HILLS

Consent Objects, Not a Checkbox

01

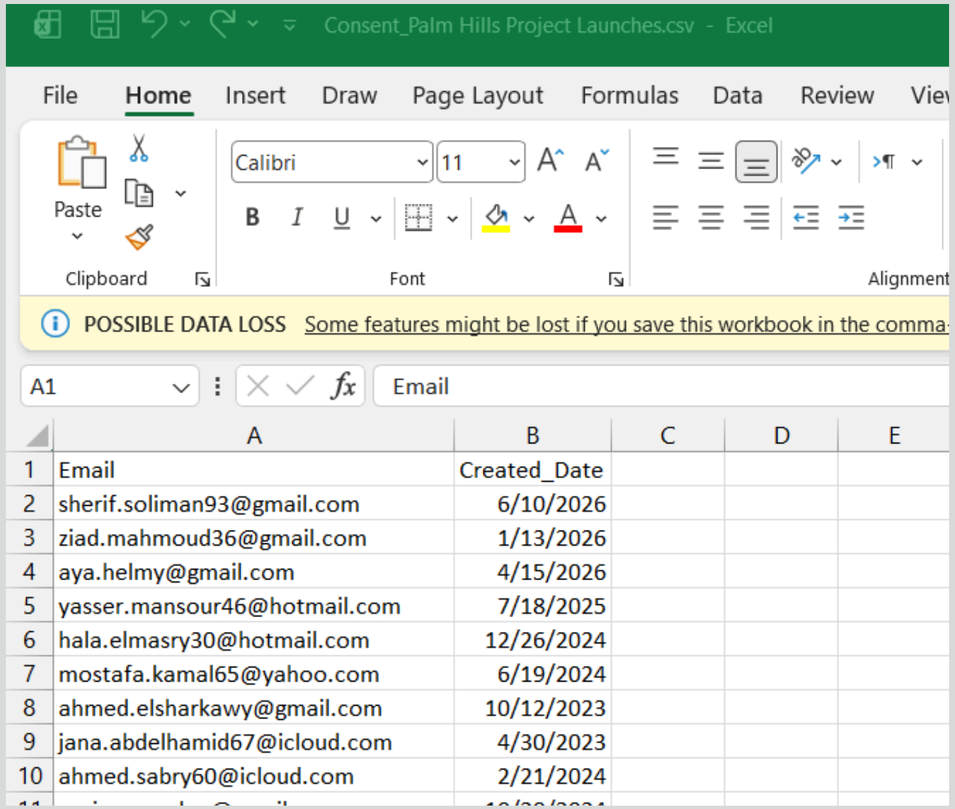

Consent_Email and Consent_SMS are stored as individual consent records per contact — not a single boolean field. Each object holds the consent status and timestamp independently.

02

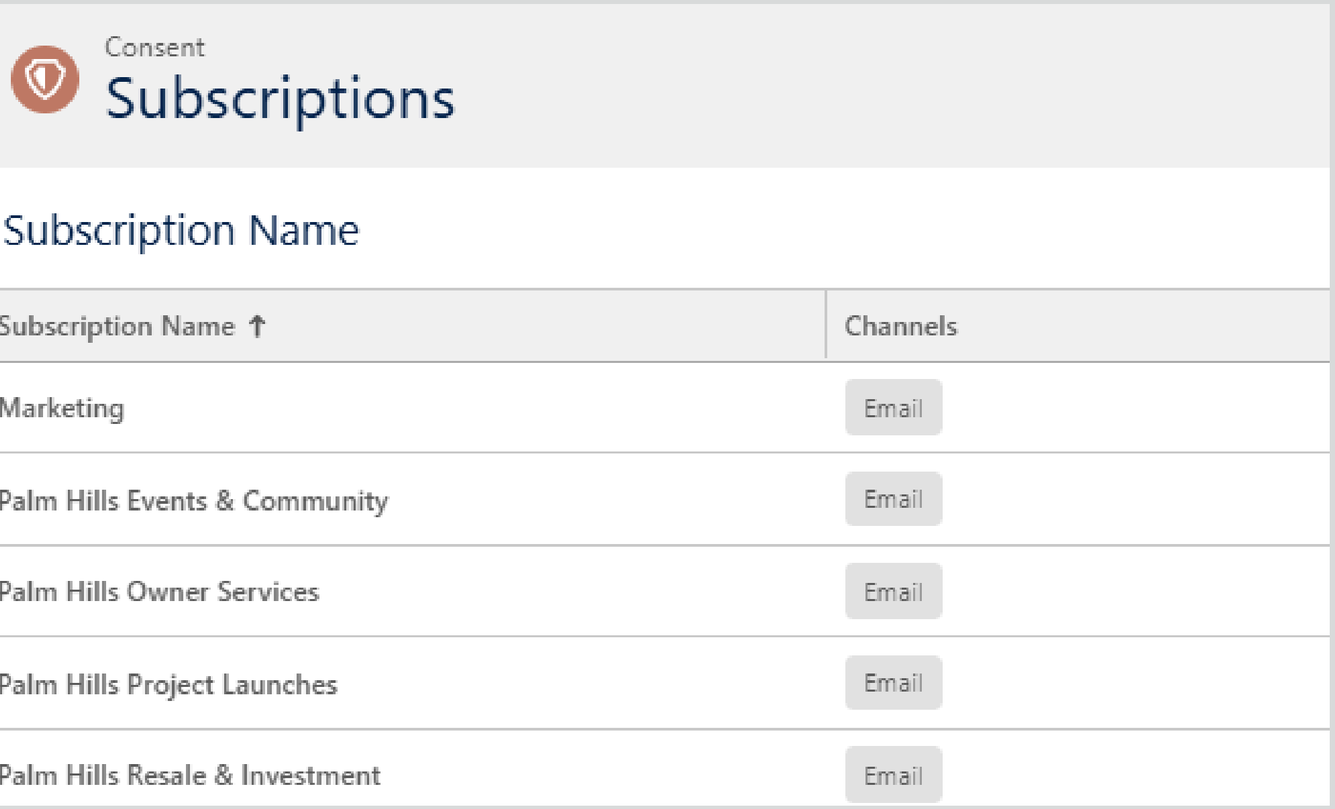

Consent_WhatsApp and Subscribed_Topics follow the same pattern. WhatsApp is gated to the community segment only. Subscribed_Topics controls content preference at the campaign level.

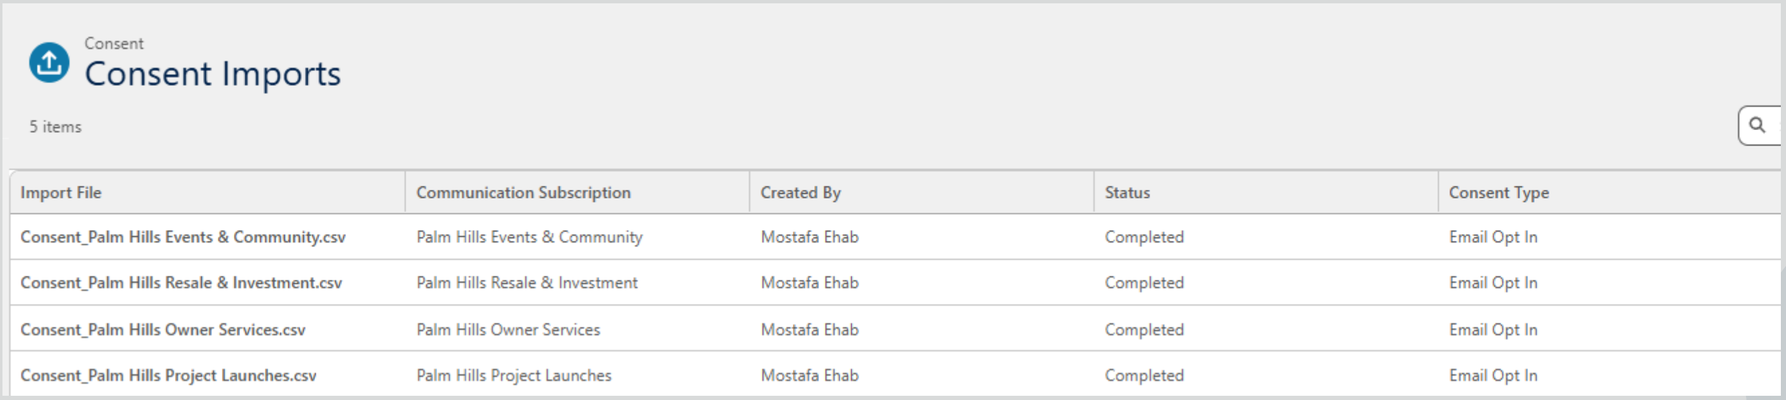

Four consent objects. Four independent sources of truth. No send fires without a live read of the relevant object at the moment of dispatch, not at segment build time. A ticked box at sign-up is not sufficient; the object must show an active, timestamped consent record. This is what separates a compliant journey from a risky one.

PALM HILLS

Consent: Not Set?

01

Not Set is treated as no consent.

If Consent_Email, Consent_SMS, or Consent_WhatsApp is blank or null, the journey suppresses that channel for the contact,.... no send, no fallback attempt.

02

Not Set is never assumed to mean yes or Opt in. If explict consent isn't present, system defaults to not sending

PALM HILLS

Preference Centre Sketch

What the recipient sees when they click Manage Preferences.

Four toggles, each mapped to a Consent Object:
- Palm Hills Project Launches (Email, SMS, WhatsApp)
- Palm Hills Owner Services (Email, SMS)
- Palm Hills Resale & Investment (Email)
- Palm Hills Events & Community (Email, WhatsApp)

Every toggle writes back to the live Consent record in real time. The journey re-checks consent before every send, so a mid-journey opt-out is honoured on the next node (not at the next campaign).

No free-text fields. No confusing category names. One Unsubscribe-All link at the bottom, clearly labelled.

PALM HILLS

What the Data Cannot Prove

01

88 contacts is a directional sample, not a statistically significant population. Conversion rates derived from this journey cannot be generalised to future campaigns or broader segments without a larger controlled test.

02

Engagement score predicts intent but not commitment. A high score means the contact is warm. It does not mean they will book.

PALM HILLS

What I Would Do Differently

01

Start with a higher send volume. The 61-person addressable pool is too small to hit 120 booked visits. Next build begins with paid acquisition running in parallel from day one.

02

Separate the Owner flow into its own journey earlier. Mixing cross-sell and nurture logic in one canvas added suppression complexity that a dedicated flow would have avoided entirely.

Thank You.

Mostafa Ehab
